

ISHWAR

Ishwar: So just now, I did a simple search asking to show "pictures in hoodies."

Saurabh: No, the last time you searched, you basically searched for a hoodie.

Ishwar: And what did you type in it then? "Pictures in hoodies."

Saurabh: Okay. So did it give a result? Yes, it gave the results with hoodies.

Ishwar: But then? That's correct, but a lot of other ads also come up, right... In that, it asks to show embarrassing photos etc. I searched for all this too. Like, I searched for embarrassing ones, or what do you call it, searched for some funny ones.

Saurabh: No, what you are saying—on Google Photos you have to give a certain name. Okay? After that, it can come up. Meaning, if you assign a person's name... like you gave the name *Bevda* (Drunkard). Okay. Then if you type "funny photos of *bevda*", then it will come up. That's how it basically works.

Ishwar: Name where? You mean in the search, we have to give a name to the photo?

Saurabh: Yes, you have to give a name to the face there. Now how it happens is, it detects the face and shows everyone's different faces, and you can give them a name. Once you give a name, you can search according to that specific person.

Ishwar: So is your primary app the Samsung Gallery?

Saurabh: Yes, I use Samsung's gallery only.

Ishwar: Okay, and does Samsung have this search option?

Saurabh: There is a search option in Samsung's gallery too, but you have to be very specific in it. Like asking it to show clear photos, blurry photos, event photos, or scenic photos.

Saurabh: Do one thing, open the app. Scroll down a bit, pick a photo you know well, and describe that photo in the search. Check if it retrieves that exact same photo.

Ishwar: Here is a gardening photo.

Saurabh: Gardening? Meaning planting trees etc., right? Try putting that in.

Ishwar: Wait, is it asking to enable Gemini? No, that's a different thing. You were saying that if Gemini is enabled then you get full access or something. But on the iPhone, the option to enable Gemini didn't even come up. This is a totally different headache, bro. I have a lot of

limitations on iPhone. There's no option for me to enable Gemini there. I looked on YouTube and many people are accessing it, but I don't understand how I'm supposed to work without the option.

Saurabh: Now for you, I had assigned a name to your face in the suggestions. I added "Pictures of Saurabh". Now there are a lot of photos in this gallery, but it didn't detect a single one. It says "No results found". Remember we went to a *dhaba* (roadside restaurant) once? I gave your name to a face in one of those photos. Now it only shows photos from that *dhaba*, it doesn't show any other photos.

Ishwar: What now, the gardening photo I told it to search for, it didn't take it, right? I searched for "Pictures of gardening" and it said "No results found".

Saurabh: What is exactly in that photo?

Ishwar: It's a photo of planting trees at an office event.

Saurabh: Put it like this: put "planting trees".

Ishwar: "Planting trees", okay? Hmm. In this, photos of trees came up, and my photos came up. I don't know what my role is in it. Photos of dashboards, hills, lawns... all random photos came up. Damn, I don't understand it. Everyone's experience is different.

Saurabh: One person told me they find all their photos easily. If they can't, they think about who was with them in a group photo and find it that way. The regular user whose primary app is Google Photos seems to have it all sorted. I think there is a big issue with sync; your sync needs to be fully sorted.

Ishwar: Maximum iPhone users don't use Google Photos at all. Even my sync is half off. And there's no option to activate Gemini.

Saurabh: Do you feel like there should have been a feature added to make this easier? For example, auto-complete?

Ishwar: Yes, auto-complete! Like if you type "planting trees", it should suggest something next. Because our wording is sometimes different, and it only gives two or three generic suggestions. It would help narrow down the results.

Saurabh: I think those ads that are running, like "Show me embarrassing photos of my brother", they can't even pull that off in the first place. These people bring up such a bad problem statement [in their ads], I don't understand anything.

RESHAM

Saurabh: So last time when you did this... I'll speak in Hindi. When you used it last time, what specific photo were you trying to find? Meaning, what were you looking for, what type of photo were you basically looking for?

Resham: Last time, actually... Ganpati is hosted at my place, so I wanted to see last time's decoration to see how it was for reference. So I searched for it.

Resham: I had created a folder named 'Ganpati' where I can see Ganpatis from every year. Right? So I was looking in that. But I didn't find it in there. Then I went to normal, meaning without any folders, and just searched for 'Ganpati' and put the year.

Saurabh: No, meaning when you searched there, you scrolled first. You didn't find it by scrolling because there were a lot of photos in it, right? Then after that, you searched, right or not?

Resham: Yes, yes. Then I searched.

Saurabh: So after searching, did it come up in that or not? It didn't come.

Resham: It didn't come in that one.

Saurabh: So then what did you do in that?

Resham: I added another keyword, I added the year. So based on the year, it showed up. But the exact photo I wanted didn't appear, though something similar around that showed up.

Resham: I got a photo of that year, but the exact photo I was looking for—front-facing—I didn't find that, I found a side-facing one just by searching.

Saurabh: Okay, this is a recent thing. Has it ever happened that you are searching, and you know the photo exists, but you never found it... meaning it wasn't even possible for Google to find it for you?

Resham: Yes, that has happened too. I have very old photos that I know I had backed up, but I am not finding them. I would try searching by putting different keywords, but I still couldn't find it.

Resham: So I just gave up. Didn't look for it then.

Saurabh: And have you ever searched specifically, meaning an address, or a person, or something like an event... did you do a specific search? Events are okay, like an address, a specific place... and you knew you took a photo there. Have you searched something like that?

Resham: Yes, I have searched based on location. Like I went out somewhere to roam, so for that location... I hadn't made a separate folder for it, but I knew the location and I remembered that I clicked photos. So I searched using that location name, the name of the place, and tried it. It comes up, properly.

Saurabh: It comes up? Meaning if you put the location, it basically comes up like that.

Resham: Yes, if you put the location or the name of the place or whatever, it was coming up for me.

Saurabh: So, like sometimes search doesn't work, as you were saying, like you couldn't find Ganpati photos. So where else do you look? Meaning, do you just have one app, Google Photos?

Resham: I have only one app, it's just Google Photos.

Saurabh: Oh. Do you have a Realme gallery etc... you have a Realme phone, right? You don't use it?

Resham: No no. I don't use it.

Saurabh: You have a Realme phone, right?

Resham: Yes, Realme.

Saurabh: So you don't use it in that.

Saurabh: Do you sometimes, like... sometimes it happens that we know we made a specific folder, or there's a photo in a folder. Did you have to look into multiple folders, or favorites, or did you have to check something like that? Like you had to search in two or four places?

Resham: I couldn't find it. Meaning, not in search, in folders.

Resham: In folders, usually, I can find it by year. If I don't remember when I clicked it, but I know this guy or girl was in the photo, then I open that person's folder and then scroll and check in that.

Saurabh: Meaning, that is your primary app, so I think you must have given names to all those people.

Resham: Yes, I have kept them. For maximum people who I know.

Saurabh: Okay. So like, you were talking about a place, so how did you search for it? Meaning what did you type there?

Resham: I just typed the name of the place. Like there's a place near Wardha, Yela Khedi... so there, I just put that place's name...

Saurabh: So meaning there... you didn't need it to be so specific, but you knew you had taken a photo there. And you wanted something related to that. Meaning even after it showed multiple options, you were happy that, okay, I got it. You didn't have to scroll much? After putting a keyword, you basically got it sorted.

Resham: Yes, sorted and found the photos. Then whatever I needed, I...

Saurabh: Like during Ganpati time, you searched and didn't find it. First of all. Then you put the year. Then still, the photo you wanted didn't come up. So what do you think... what should you have added to the prompt so that you would have found that photo?

Resham: Maybe I should have mentioned the direction... like front-facing or something like that. I wanted the photo from this angle... so maybe it would have sorted and given it.

Saurabh: And like, if you don't find a photo in Google Photos, do you check your other phone's gallery or not?

Resham: First I check the phone's gallery, then Google Photos. But if I'm looking for an older photo... meaning, up to a certain year, my data is saved in my phone's gallery. But the older data is in my Google Photos.

Saurabh: Oh, meaning you were looking for some old stuff. And I think there's no search option in Realme according to me.

Resham: No, there isn't anything.

Saurabh: So here, when it gets synced, then it is found. Like in my case, the sync on this phone is also off, and the sync on the phone before this was also off. So for me, the very old photos

are the only ones that are synced. So meaning, the old photos you have are synced, and if you have to look at them, you maybe use Google Photos.

Resham: Yes. If I know a specific person, it automatically creates a folder, I like that feature basically.

Saurabh: Have you ever experienced a time when you are searching for photos, and it's taking so much time that you just think, 'It's been too long, man, I won't search anymore'?

Resham: It taking time... has it happened, or does it give wrong results...

Resham: It hasn't given wrong results so far according to me.

Saurabh: Meaning irrelevant... like if you didn't get what you wanted, but you get something or the other?

Resham: Yes, it gives something or the other. It searches and finds it. That has happened. And it hasn't taken a lot of time like that. Meaning there was no need to spend a lot of time.

Saurabh: So do you sometimes get frustrated, like you didn't find it, "Oh man, since when have I been looking, I put this too, I put that too"? Does that happen? Or does it give you many options and you find what you need?

Resham: No, meaning it has happened, a long time ago. Now I don't remember what I was searching for, but after searching a lot, I still couldn't find it. I searched a lot, scrolled for 15-20 minutes, year by year, but I still wasn't getting it. So then I just left it, skipped it.

Saurabh: Okay. And like if you want to change one thing, this Google Photos... what do you think? Meaning in terms of search. If they gave something like this, it would be fun. Like you faced a problem, you had to put the year, you didn't find the front-facing one... so if they gave you some option like this, you would feel that search has become easy, and you got what you wanted easily.

Resham: One thing we can do is, if in the search, whatever keyword we are looking for, if we put that... a single keyword or whatever. After that, doesn't it give suggestions below? Like, 'Are you looking for this year?' or 'Are you looking for this time or month?' or any place. If they give an option like that, it would be easy to sort.

Saurabh: Understood. Hmm, okay, I understand. Meaning basically, like how we search in Google, it gives autocomplete, or it basically gives suggestions.

Resham: It gives suggestions, like do you want to find this, do you want to find that. Like if I say I want to see Ganpati. But I just put Ganpati and I will get a lot of types, whatever photos I have saved. But if I put Ganpati decoration or... meaning it should suggest, do you want to add

decoration after Ganpati, do you want to put the year, or do you want to see Ganpati of some place... meaning options should come right there. Like, if you select this, you want to put the year, or put the decoration... it automatically gives suggestions basically.

Saurabh: Yes, they can do this, or maybe they can... doesn't it show boxes below? Meaning two-four rectangular boxes with suggestions, like do you want to see Ganpati for this year or this place. So if you click there, the photos will be filtered and sorted.

Resham: Yes, filter... meaning basically filter types.

Saurabh: Yes, filter. Right now, okay, this I understand. Improvements I understand, what you think. And like, you use Google Photos now. So do you face any other difficulty? Meaning in terms of UI, or anything, meaning... sometimes it gets slow, sometimes it seems glitchy, anything like that?

Resham: On the basis of UI...

Saurabh: Not UI... any problem, difficulty or problem, whatever you can think of.

Resham: Like that shared folder, right? Where people add their photos and send a link, and it automatically comes to our Google Photos. It takes time to find that shared one. I felt that.

Saurabh: Meaning when you search Google, it takes time in that too, is that what you mean?

Resham: Yes. The shared folders, right... you don't find them easily. Meaning you have to search for them, go to the options and see, then you find it.

Saurabh: Does it get searched?

Resham: I haven't tried searching, but let me see...

Resham: No, it's not coming up. On searching.

Saurabh: No, meaning shared things don't get searched basically, I think.

Resham: The shared folder is not visible. Hmm.

Saurabh: Okay, okay, understood. So these were the only questions, I will turn off the recording. Do you want to add anything else? Whatever XYZ.

Resham: I am thinking, wait a minute.

Resham: No, as of now, no. If Google Photos builds all this, then... no, nothing.

Saurabh: Okay. Give me one second, I will turn it off.

NAINA

Saurabh: Let's take a hypothetical scenario. You are in the office and you have to show a specific photo, but you are searching and you can't find it. What will you do?

Naina: Nothing, then I think about which month or year it's in, and I start looking accordingly.

Saurabh: Meaning all your photos are synced, so your primary app for looking at new and old photos or searching photos is Google Photos.

Naina: Yes, it's Google Photos. For example, if it's your or Resham's birthday, I don't directly search the regular gallery because I know I won't find it. I go to my photos in Google Photos, click on Resham, take a screenshot, and use that. Yes, there's one thing there... you have to take a screenshot, it doesn't give a direct download option where if you download it, it directly syncs to the top of your photos. There's no option like that.

Saurabh: If you had to make an improvement in Google Search specifically, what would you suggest?

Naina: The most important thing is that when we search, we need that camera option next to it. So we get it directly. And the second thing, I'm not talking about search but this download option, we need a download option, man.

Saurabh: And if they gave something in search, for example like filters...

Naina: Yes, they can provide it in filters, they can try that, or autocomplete. Because in search, we don't remember everything, sometimes particular things stay in memory and the rest is forgotten.

Saurabh: Like if you went somewhere... like suppose you went to visit Pune. You must have taken a photo there. So if you skip the location and describe the place, do you think the photo will come up? If you describe the background a bit, like temple or monsoon...

Naina: One minute... I'll check... I'll try 'temple'. Yes, if you search 'temple', it comes up.

Saurabh: Do a specific search. A specific place.

Naina: Yes, I entered it, look. I put one temple, I had gone to Ram Dhara temple, and it came directly.

Saurabh: No no, not like that. You have many temples in your photos. Find a specific photo, think of one, and describe it in the search and see what happens. Like put a specific photo like 'I am sitting here', yes you can put that boat photo.

Naina: Boat, one minute, I remember one. Hmm, 'standing near fort' comes up.

Saurabh: Is it the exact one you were thinking of?

Naina: Yes, correct, the same one came up.

Saurabh: And if there's any common photo, like you went somewhere last time, so you must have a lot of temple photos. Try finding that specific photo based on what you were wearing.

Naina: Wait a minute. What was I wearing... white top. White, yes, look if I put it in clothes, it gives all of them, meaning if we put normal 'white top' or something...

Saurabh: No, like you said something specific like 'white clothes', so put it like 'I was wearing white clothes in the temple', something like that and see if it gives it...

Naina: White top.. wearing white top... wearing white top and standing near temple... yes it came, it came!

Saurabh: Okay, but earlier when you just put 'white top' it didn't come, right?

Naina: Obviously when I put 'white top' things in my bag would have also come up, other things would have also come up.

Saurabh: So in this, did it give any nudge, meaning did it ask anything or try to help... like Google Search giving a nudge so your experience could have been better? Like asking 'which temple' or 'which time'?

Naina: Currently no, because it is giving photos.

Saurabh: Now take an example of a photo that you took from a specific year, and search like that. First do a normal search, then after that put the year and check.

Naina: Okay, listen, if we put "2026 photos of mine".

Saurabh: It doesn't give them?

Naina: No, not like that. Now look, you are not understanding what I am saying. When you were in Airtel, you went to the hospital, remember? Try searching for that photo. Don't put the year. I put 'Airtel photos', so whatever specific Airtel photos are there came up.

Saurabh: For Airtel, look, you are getting confused... we don't want a generalized result. When we search for something, we have a photo in our mind that we know we took. Like I took a photo looking at the sunset. I want exactly that specific photo. My goal is that I look at a specific photo, it didn't give it, then I put the year... so it adds a year and gives better results, does it improve the results?

Naina: 26 is going on, mother... 2026 is almost over... It came when I put the year. But it didn't come when I put it like that without the year.

Saurabh: Okay, fine, it will work. I will turn off the recording.

PRITISH

****Pritish:**** Now in Google Photos, that new AI option is coming, AI photos.

****Saurabh:**** Hmm hmm hmm.

****Pritish:**** And now that one should have a bit more of its... what do you call it... power increased.

****Saurabh:**** No, for now just answer the questions I am asking you.

****Pritish:**** Yes, yes, tell me.

****Saurabh:**** Have you ever tried searching for old photos like this?

****Pritish:**** I haven't really tried searching for them, but if there's ever a need or if we randomly take a photo, it just shows up in the suggestions for us.

****Saurabh:**** Have you used the search feature or not?

****Pritish:**** I have used the search feature.

****Saurabh:**** What did you use it for?

****Pritish:**** Like, you know, we take photos of little kids and keep them, so I used it to tease them a bit, just for fun and joking around.

****Saurabh:**** So now I'm asking you, which photo did you search for the last time in Google Photos?

****Pritish:**** Which photo did I search for...

****Saurabh:**** And the one you searched for, did you know that such a photo exists? Okay, you knew that, right, and then why did you search for it? If you don't remember the exact last time, just tell me whatever you remember.

****Pritish:**** I don't remember exactly, but sometimes what happens is we have to submit documents or something, so we need the exact document we saved...

****Pritish:**** It stays in good quality, so we just upload it. Suppose an Aadhar card is needed, then we upload the photo...

****Saurabh:**** No, then that in Google Photos... yes, okay.

****Pritish:**** Okay, I'll tell you a recent one. There's a little girl, my sister, I searched for her photo. I had to send all her old photos, so I got all the photos and sent them.

****Saurabh:**** Okay.

****Saurabh:**** So when you had to find these photos, what did you type basically? Like there's an option in Google Photos where you can give names to people's faces.

****Pritish:**** Yes yes yes.

****Saurabh:**** So how did you search then? Meaning, what did you type basically?

****Pritish:**** In the Google Photos I use, names keep getting added already.

****Saurabh:**** You mean when we upload a photo, the option comes to 'name this person' etc.?

****Pritish:**** Yes, they were added like that. Suppose it's mom, dad, or whoever, you put their name and they come up. The ones we tagged automatically.

****Saurabh:**** No no, like you said you were searching for someone's photo, so what did you type in that search query? What prompt did you give basically?

****Pritish:**** What prompt did I give? "Sirja photos".

****Saurabh:**** That's it?

****Pritish:**** Hmm, that's it, and it came up.

****Saurabh:**** Okay, and has it ever happened to you that you needed to find a specific photo, for example...

****Pritish:**** Correct.

****Saurabh:**** ...and you described that photo? Like, "recently we went to that temple somewhere, it was wintertime, I was wearing those purple clothes or a full black jacket", right?

****Saurabh:**** Have you ever searched specifically like this, and what result did you get from it?

****Pritish:**** No no, never had that much of a need.

****Saurabh:**** Meaning you haven't searched this specifically basically.

****Pritish:**** No.

****Saurabh:**** And whenever you use the search option now, what things do you use it for? You just told one scenario about that little girl.

****Pritish:**** Normally for sharing photos, and after that if we want to find any photos, or any documents or bills, I use it for that.

****Saurabh:**** Can you find bills with it then?

****Pritish:**** Yes.

****Saurabh:**** How do you find them, what do you type? Like suppose you have to find last year's August bill...

****Pritish:**** Not exactly, but if I put "Ravi Mens", and suppose you have taken four or five photos, then whatever bills there are in the name of Ravi Mens come up in suggestions.

****Saurabh:**** Ravi Mens, meaning it was a bill in that name.

****Pritish:**** The bill for his shop, so it finds the name on the bill and gives it to us.

****Saurabh:**** Okay.

****Saurabh:**** But has it ever happened that... okay, this is a very generalized thing, right, that you are searching for all bills overall.

****Pritish:**** Yes.

****Saurabh:**** But if you looked for something specific in your search? Specific meaning like, "this date's, this month's, this year's bill". Does it show the result then?

****Pritish:**** No, I will have to try that.

****Saurabh:**** Do it then, open the app.

****Pritish:**** Wait.

****Saurabh:**** Meaning, take a scenario where you are looking for a specific photo, okay, of a specific location. You have the photo in your mind, describe it roughly.

****Pritish:**** Hmm hmm.

****Saurabh:**** And then check if it comes up.

****Pritish:**** Alright.

****Saurabh:**** Check it like that once.

****Pritish:**** Yes, wait.

****Pritish:**** What should I type? Wait.

****Saurabh:**** First of all, imagine the photo you want to find, and put the description according to that.

****Pritish:**** Okay... Lake... in... Rajasthan... Night... View.

****Pritish:**** Yes, it came.

****Saurabh:**** Did it come? You typed "Lake in Rajasthan Night View".

****Pritish:**** Hmm.

****Saurabh:**** Okay, so did the one you wanted come up?

****Pritish:**** Yes yes yes.

****Saurabh:**** And did the exact one come or relevant ones? Meaning if we take 10 photos, out of 10 we want one...

****Pritish:**** All of them came, all came.

****Saurabh:**** All came.

****Pritish:**** Hmm.

****Saurabh:**** Try finding a person. Type specifically that you took this person's photo somewhere...

****Pritish:**** Wait wait, I will put Anuj's name.

****Saurabh:**** Don't put a recent wedding one, put something a bit further back, meaning an older one.

****Pritish:**** I will put "Anuj photos of Rajasthan", from four-five years ago.

****Saurabh:**** When did four-five years happen, it's been two years.

****Pritish:**** Yes, put the two-year-old one, put that.

****Saurabh:**** You know what, initially I wasn't even going to ask you questions. I thought you have an iPhone so you must be using only that, using those photos.

****Pritish:**** No, what happens is space falls short on the iPhone, so I uploaded photos on Drive as well.

****Saurabh:**** Oh, is that so.

****Pritish:**** Because when I managed it in both places, my storage is 128 GB right, so I have to manage it.

****Saurabh:**** Hmm hmm.

****Pritish:**** So look here, I put "Anuj photos of Rajasthan" etc... "Anuj and friends exploring" and so on came up...

****Saurabh:**** So in this, there are irrelevant photos too, in which Anuj isn't there, that also came?

****Pritish:**** No, in those full photos, it could be a group too, but is Anuj in it or not?

****Saurabh:**** No, in that it gave some photos of me too, right, so it...

****Pritish:**** Oh, meaning you guys have similar faces, so it gave your photo too, like that.

****Saurabh:**** No, not similar faces either. It's maybe because I put Rajasthan, so it...

****Pritish:**** Yes, now it caught that.

****Saurabh:**** Yes, so it caught that.

****Saurabh:**** Did you assign the name Anuj? Meaning to Anuj's face?

****Pritish:**** Yes yes.

****Saurabh:**** Then... do one thing, now put the year in the same prompt and check what result changes. 2024 I think.

****Pritish:**** 2024.

****Pritish:**** So it gave Anuj's photos among the 2000 photos.

****Saurabh:**** Hmm.

****Pritish:**** Okay.

****Saurabh:**** No.

****Pritish:**** No.

****Saurabh:**** Meaning it found it, it was giving everything.

****Saurabh:**** Yes, it was giving everything, it didn't give the specific result you wanted basically.

****Pritish:**** When I put 23, everything came.

****Saurabh:**** Everything came meaning did bills come or not? Meaning is it an irrelevant result basically?

****Pritish:**** No, it is a relevant result, all bills came.

****Pritish:**** All bills came.

****Saurabh:**** Yes.

****Saurabh:**** And all bills from that year came. But if you put a specific date...

****Pritish:**** Date, meaning wait, I will have to put it just like the date is in the photo, then I put ours in English.

****Saurabh:**** Hmm.

****Pritish:**** No, but it shouldn't be like that. It should take that too, numbers too... numbers and letters too, it should take everything.

****Saurabh:**** Hmm.

****Pritish:**** I'll try putting Ambazari, I had gone to Ambazari sometime.

****Pritish:**** Yes they came, when I put Ambazari, whatever photos of Ambazari were there, they came.

****Saurabh:**** Okay.

****Saurabh:**** And has it ever happened to you that you are using it and the photo is not found? Meaning basically the photo you wanted didn't even get searched?

****Saurabh:**** Do you remember anything like that?

****Pritish:**** No. You know what the problem is? This feature is very... meaning damn it, very few people have used it.

****Saurabh:**** Hmm.

****Pritish:**** And theirs is absolutely specific that whatever has to be done, has to be done about that only.

****Saurabh:**** That's what it is.

****Pritish:**** Hmm.

****Saurabh:**** While you were searching, did you feel like it was slow or anything... did you feel something like that?

****Pritish:**** No, it's fine, it's okay, it's like our ChatGPT.

****Saurabh:**** Okay.

****Saurabh:**** Now like this feature is there, if you want to make some improvement in it okay, and someone is randomly asking you...

****Pritish:**** Make it a bit easy, its interface is very hard.

****Saurabh:**** Interface very hard meaning... meaning as far as I know, you have to click on normal search and type, that's it, it's only that much right?

****Pritish:**** You have to type, but the thing is many options come up.

****Saurabh:**** Like which collection it is, which creation it is, what it is...

****Saurabh:**** Those suggestions come right?

****Pritish:**** Yes yes yes, so those suggestions come a lot.

****Saurabh:**** Okay.

****Saurabh:**** So do you still feel like something specific should be done in this, meaning any input from your side?

****Pritish:**** Wait, I'll do one thing. Like I told you, I have doctor's prescriptions uploaded in this.

****Saurabh:**** Hmm.

****Pritish:**** So I will try searching for one... and also check which suggestions come up while completing the sentence.

****Saurabh:**** Yes, okay.

****Pritish:**** I'll put a name, "Prachi Vakhre bills".

****Pritish:**** Yes look, when I searched Prachi Vakhre bill, all the bills in Prachi Vakhre's name came up.

****Saurabh:**** They came up. Did all come, Prachi Vakhre didn't come, all came?

****Pritish:**** Oh, all came meaning they didn't check the name on the prescription properly basically.

****Saurabh:**** Didn't check it, yes.

****Pritish:**** Oh, meaning it messes up for documents.

****Pritish:**** Okay, now what did you say, which date's... look here, a summary also comes, 'here are some', I will send you a screenshot.

****Saurabh:**** Hmm keep sending, keep sending. Take them and keep, you can send them all together later.

****Pritish:**** Yes okay. I did Prachi Vakhre bill and it sent the full bill. Now I want to ask it, Prachi Vakhre bill of 12-12-2023 okay...

****Pritish:**** Prachi Vakhre bill of 12 12 23.

****Pritish:**** No, it didn't find it. Didn't find 12-12.

****Saurabh:**** Oh, try putting just 2023.

****Pritish:**** Yes doing that now. "Bill of 2023".

****Saurabh:**** Meaning it found it, meaning it was giving everything?

****Pritish:**** Yes it was giving everything, meaning it didn't give the specific result wanted basically.

****Pritish:**** When I put 23, everything came.

****Saurabh:**** Everything came, meaning did bills come or not, meaning is it an irrelevant result basically?

****Pritish:**** No it is a relevant result, all bills came.

****Saurabh:**** All bills came.

****Pritish:**** Yes.

****Saurabh:**** And all bills of that year came. But if you put a specific date, then that date...

****Pritish:**** Date meaning wait, I will have to put the date just like it is in the photo, then I put ours in English.

****Saurabh:**** Hmm.

****Pritish:**** No, but it shouldn't be like that. It should take that too, numbers too... numbers and letters too, it should take everything.

****Saurabh:**** Hmm.

****Pritish:**** No, it is not finding like that, it's not dated.

****Saurabh:**** Not dated. Hmm.

****Saurabh:**** Okay, so then what... what additional suggestions do you have, like someone just told me that maybe we can add a filter in this. One person also said that if I am searching for something about a person, then I should have an option to upload a photo in it, like I uploaded a photo, okay. So if there's any such input from your end, then tell me.

****Pritish:**** That photo uploading one is good, like how Google Lens works.

****Saurabh:**** Like Google Lens works, right?

****Pritish:**** Yes yes yes.

****Saurabh:**** Like that, hmm.

****Saurabh:**** Anything else?

****Saurabh:**** You think about this, and do you feel until now that we talked this much, did we miss anything in this that we should have discussed?

****Pritish:**** No, it's fine.

****Saurabh:**** We want to do the main focus on that, on search, right?

****Pritish:**** Yes, have to do it on the search button only.

****Saurabh:**** Nothing?

****Pritish:**** No nothing. If anything comes up, then you can let me know, you can drop a voice note.

****Saurabh:**** Yes okay, I am closing it.
